

Let's help you find your Flight Simulator 2020 Community Folder.

The Community folder can be in many different places depending on how you installed the game. Steam, Microsoft Store, and other installers place the Community Folder in different places. Also on the first time you loaded the game you had the ability to change the location of the data (and community) folder. So this folder could be anywhere.

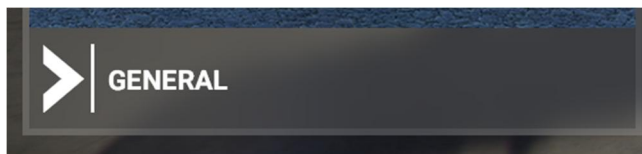

Luckily the game has an easy way to find the folder.

1. Load Flight Simulator.

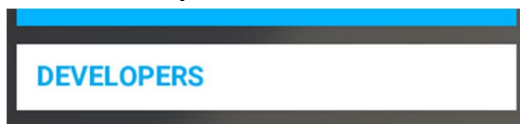

2. Go to **Options**.

3. Go to **General**.

4. Go to **Developers**.

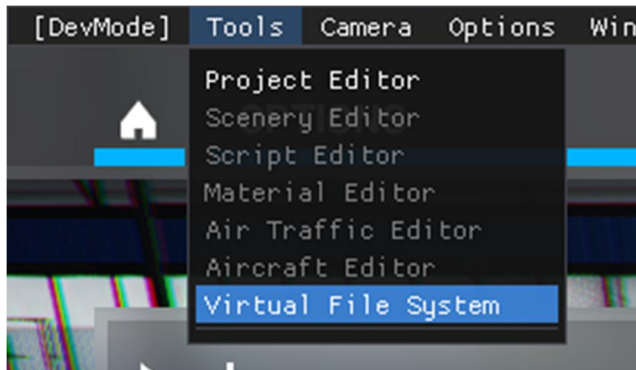

5. Turn **ON** Developer Mode.

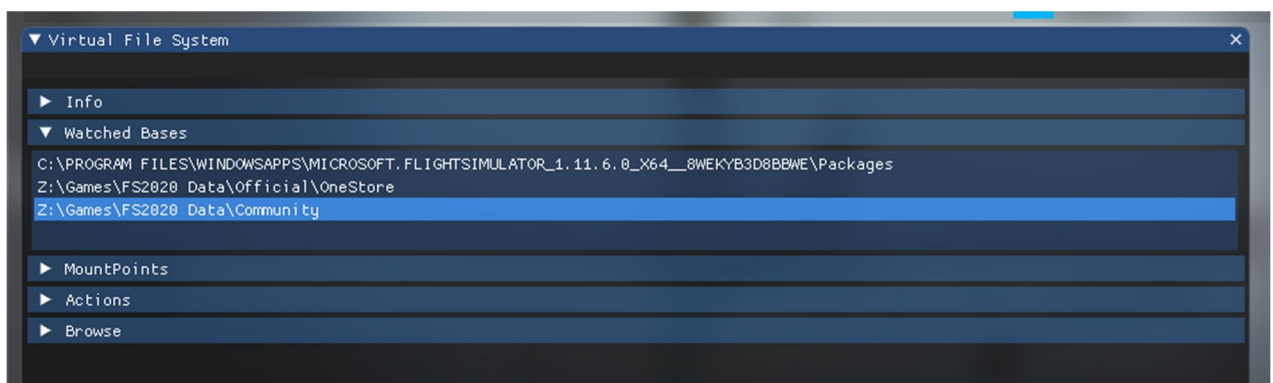

6. A new menu bar will appear at the top of screen, Click on **Tools**.

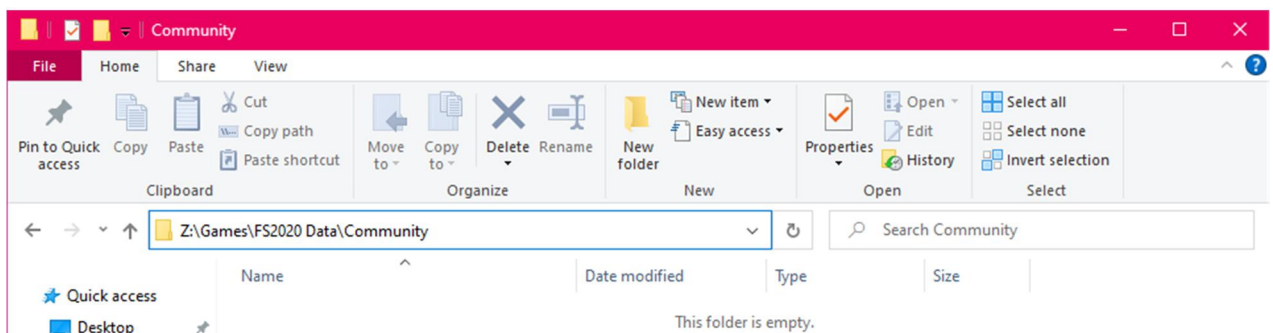

7. Click on **Virtual File System**.

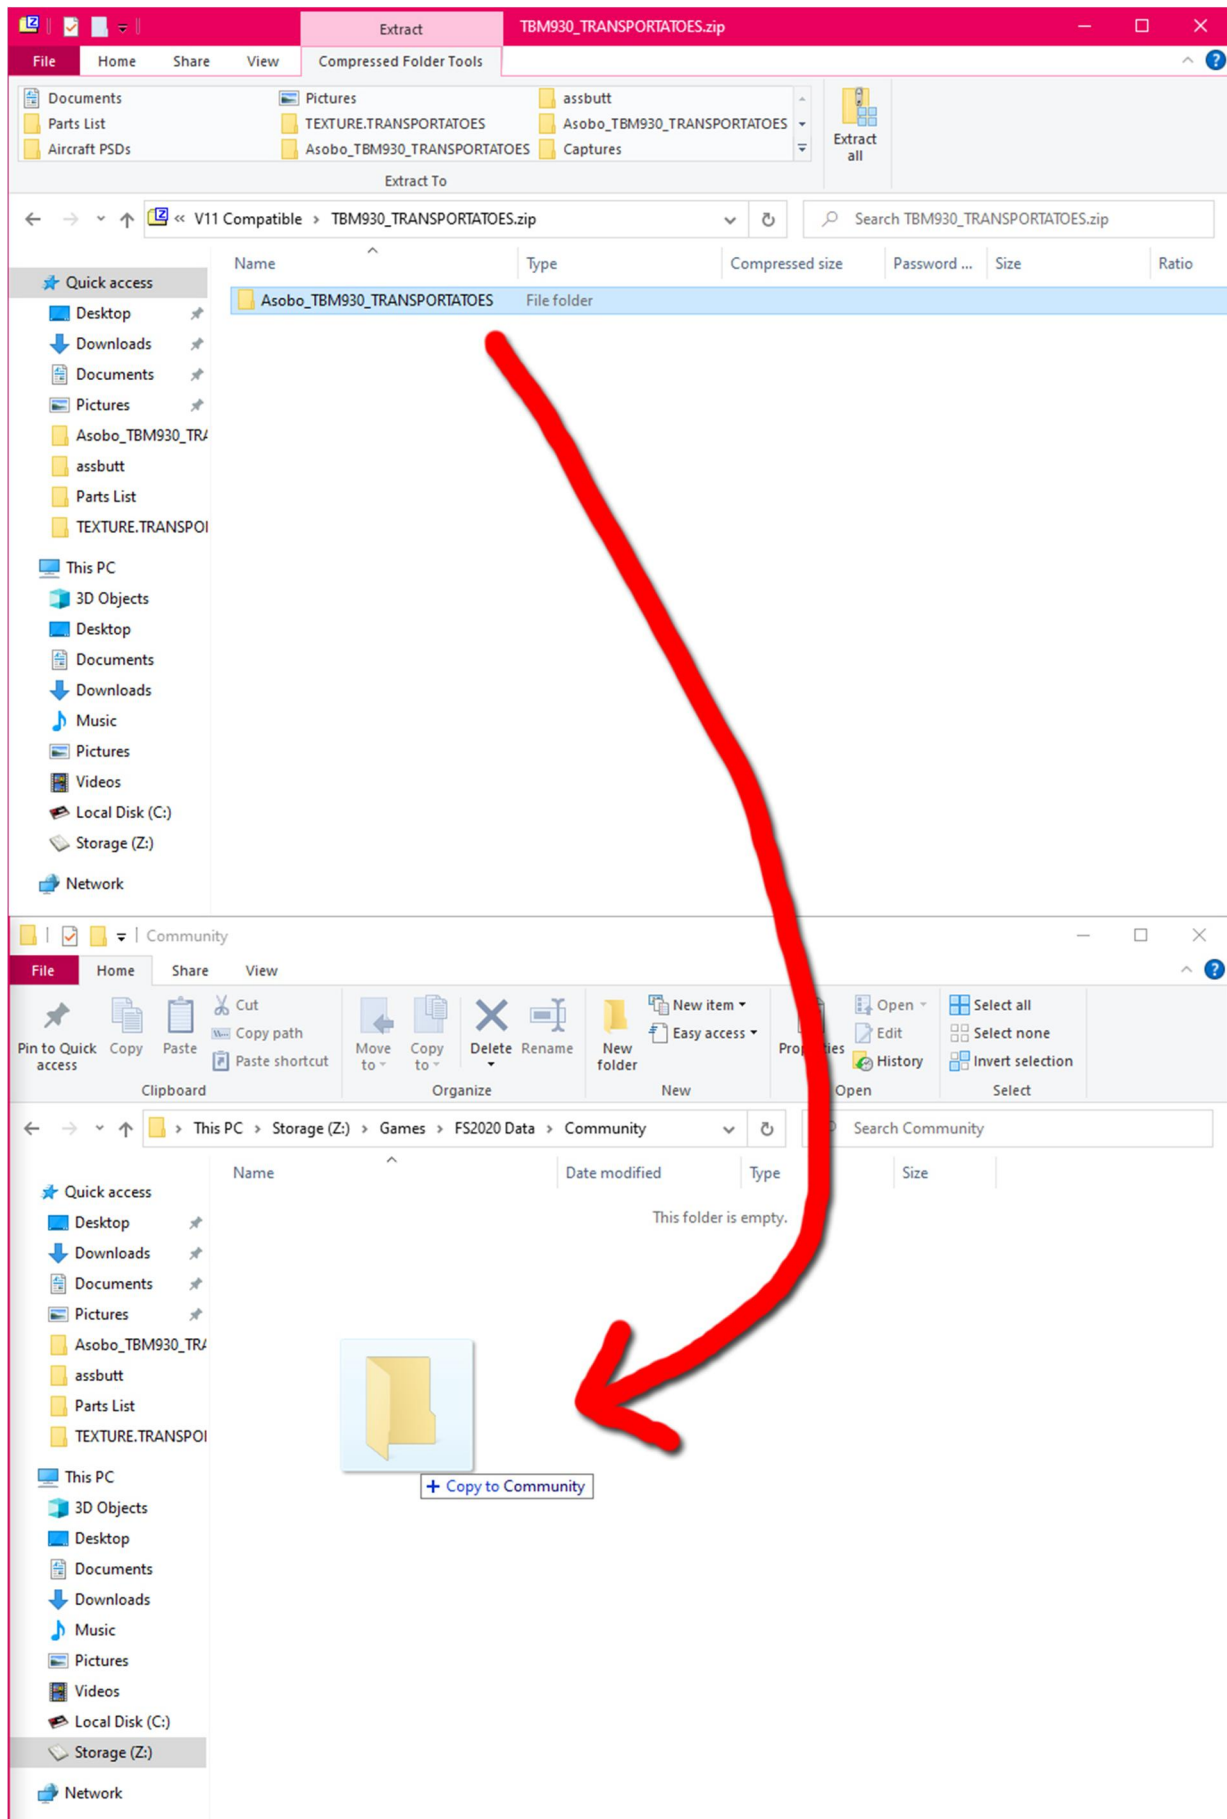

8. In the “**Watched Bases**” part of the menu, you will see three directories. The one you want ends in “**Community**” – This folder is where you will be installing your mods. – YOURS WILL BE DIFFERENT TO THE ONE IN MY SCREENSHOT.

9. Open the same folder in Windows.

10. Drag and Drop the livery from inside the .zip file into the Community folder.

That's it! Reload the game and check out your new livery!
